WEATHER OF CONCERN

Weather of Concern

- The National Weather Service advises that a winter storm will produce heavy snow, gusty winds and rain for portions of Northern and Central California mountains and valley locations tonight, 01/24/18 through early Friday, 01/26/18.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A half to 1 inch of rainfall has fallen across the North Coast PSA since midnight. A mix of rain and higher elevation snow will spread south and eastward today and tonight. Snow accumulation levels will also lower and generally range between 1500 to 2500 feet by Thursday. Wetting moisture will overspread the entire region with this event. The North Coast, Mid Coast to Mendocino, Northwest Mountain and Northern Sierra PSA's will be favored with an additional 1.5 to 3.0 inches of liquid water. Gusty southerly winds that impacted the north overnight will transition to central and eastern portions of the region today before relaxing. Look for gusts as high as 50 mph across the higher exposed terrain. Residual light showers main continue into Friday morning before dissipating. Afternoon temperatures will be a few to several degrees below normal Thursday and Friday.

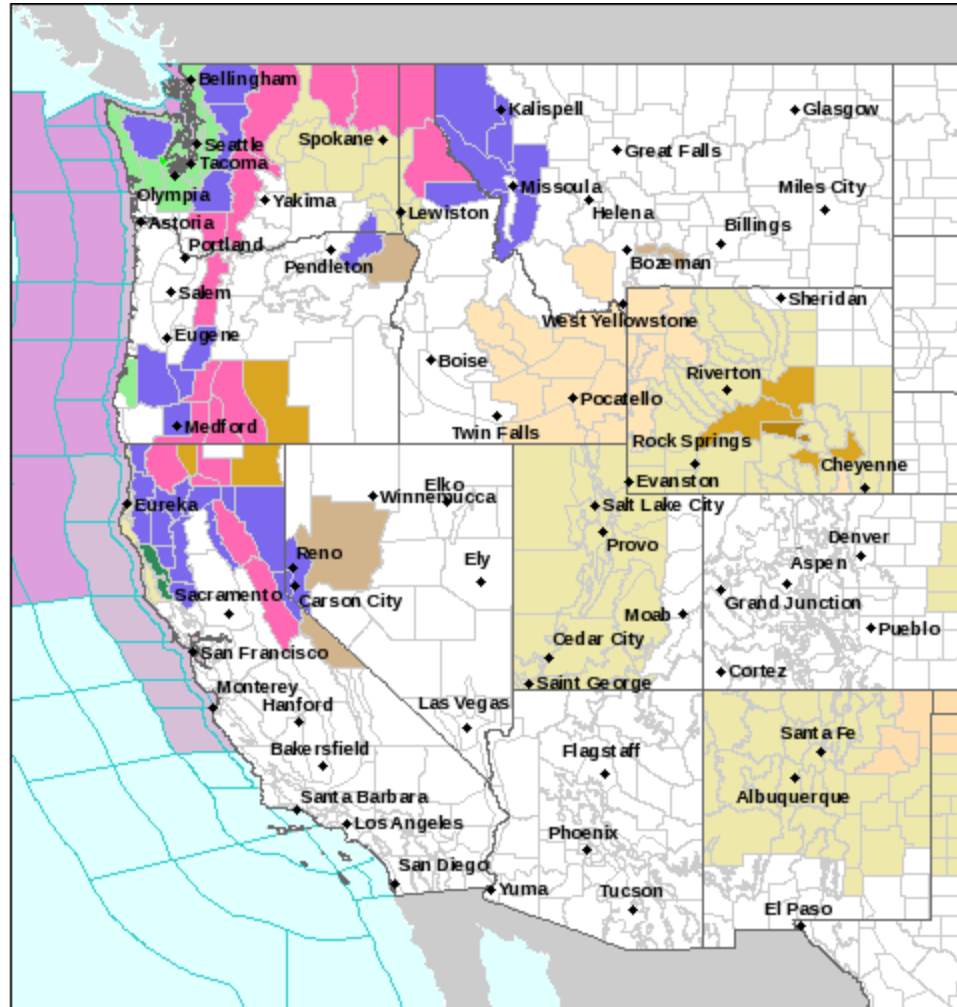

Another Pacific trough will approach the region Saturday and Saturday night and spread precipitation across the northern tier of the region. The North Coast would be favored and more rain than snow is expected since the system will be warmer. Sunday looks to be drier and warmer as a shortwave ridge tries to build.

The weak ridge will break down early next week and allow for lighter showers to spread across the far north. Confidence is rising that the overall weather pattern would turn warmer and drier next week compared to the moist and cool regime the region has been experiencing. It is very plausible this type of pattern could extend into the follow week with a few inside slider troughs impacting the far north and east and ridging off the coast.

SOUTHERN CALIFORNIA

There will be little change in the weather today as weak high pressure remains over the region. Maximum temperatures will be 5 to 10 degrees above normal, with upper 40s and 50s across the mountains and 60s to mid 70s in the valleys. Minimum humidity will be mainly between 15% and 30% away from the Central Valley and coast and winds will be light. A Pacific trough dropping down the West Coast will bring 10 to 15 degrees of cooling to much of the region Thursday. This trough will also bring scattered showers to Central California this evening through Thursday afternoon with most locations expected to receive less than a quarter inch of rainfall. However, the Central Sierra and its surrounding foothills will receive up to an inch of rainfall. The snow level will be around 5,000 feet. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert areas this evening through Thursday evening. Behind the trough, there will be north winds of 15 to 25 mph with gusts to 40 mph across Santa Barbara County and the Grapevine Thursday evening through Friday morning. Temperatures will warm a few degrees Friday. Strong high pressure will build into California from the southwest bringing a big warming and drying trend to the region Saturday through Monday. Maximum temperatures will be in the low to mid 80s across the valleys of Southern California Sunday and Monday. Minimum humidity will be mainly in the teens away from the San Joaquin Valley Sunday and Monday. Northeast winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of Southern California Saturday morning through Monday morning. The ridge of high pressure will weaken bringing a cooling trend and a little increase in humidity Tuesday and Wednesday of next week.
